

Smart SIM

Model : G40689

This is the only deleted text reader that can also display the LAST NUMBERS DIALLED, even if they have been deleted from the phones dialed numbers list!! The DNP team are very proud to announce the long awaited arrival of our new 'Smart SIM' the most advanced SIM card reader with more bang for your bucks! This package is the most advanced device of this kind available anywhere in the world! You can now get your hands on this unique 'forensic' software, along with the specially designed USB SIM reading device which can read and manipulate information held on mobile phone SIM cards. This easy-to-use deleted text message reader can display SMS text messages that have been stored on the SIM but marked as 'deleted' by a mobile phone. It also provides a permanent 'wipe' function for SMS text messages, ensuring that they cannot be recovered in this manner at a later date. If the phone user has placed their phone book on the SIM rather than the phone memory, then this information will also be retrievable. A pay-as-you-go SIM will usually display 10-20 texts, a contract SIM will usually display 20-40 texts per 'read'. The texts displayed are the last texts saved to the SIM, whether deleted or not. Success varies depending on the phone type that the SIM was used in and the way in which the phone user manages their texts. Best results are obtained from SIMs where texts are regularly deleted and where the phone has been set up to back up texts on the SIM. This is because the SIM fills with texts first, and any further texts are stored in the phone. This complete solution runs best on Windows 2000 & XP, and the SIM card reader comes with WHQL-approved PC/SC drivers, and so can be used for other applications also. Works with GSM SIM cards from almost any network. Due to the extensive range of mobile phone handsets and the way they manage SMS text messages, we cannot guarantee that our product will recover data from every SIM card. However, we have recovered a substantial amount of deleted text messages from all the SIM cards tested and therefore approved the product or sale. If a SIM has been locked with a SIM PIN, you will have to know the PIN Code in order for this to work. (Most users will lock their phone and NOT the SIM, so this shouldn't pose a problem). In Addition, some newer phones perform a permanent delete on the SMS text messages and these will NOT be recoverable. There is no way of knowing this in advance, and is something you will have to take on a 'trial and error basis', however we know that this unit outperforms every other SIM card reader in the world and has more advanced features, so if the Smart SIM can't do it... nothing can!!
